

# Safety by Design

Solutions / Safety / Safety by Design

## Ensure safety through glazing design

Reduce the exposure to risks and guarantee end-user's security through our glazing products. We manufacture high-quality reliable products and constantly look for solutions to reinforce safety. Discover our product design composition, our monobloc (one piece) windshield for an XXL vision, and emergency exit windows.

### Product design composition

We develop different glazing compositions in matters of: size, thicknesses, coatings, interlayers and more.

Saint-Gobain Sekurit Transport always offers the best compromise on technical solution according to the customer's requests and always comply with norms.

### XXL Vision

Avoid several glass panes in order to create a single glazing for better visibility.

Saint-Gobain Sekurit Transport has the capability to manufacture one-piece windshields and doors, providing the user with the widest view without any metal part that could enter his visual field.

## Emergency exit

Saint-Gobain Sekurit Transport has created a clear and safe way to exit during an emergency: a peripheral gap on the pane allowing to remove the glass by pushing or kicking after breaking it.

Adaptable to railway and other vehicles, it is the fastest breakable system, from the inside or outside.
